PROJECT FOOTAGE

Metro W.A.R. channel

CORE STACK

- Enforce Script
- Client-server RPC
- Persistent data
- Config-driven systems
- Multiplayer debugging
- Hands-on QA

TOOLS

DayZ Tools
Object Builder
Terrain Builder
Blender
Substance Painter
Adobe Photoshop

LANGUAGES

RUSSIAN

ENGLISH

Professional

ESTONIAN

Basic

SOURCE POLICY

Full source stays private. Technical walkthrough available during recruitment.

SERGEY

SENCHENKO

TECHNICAL DESIGN / GAMEPLAY SCRIPTING / LEVEL DESIGN

PROFILE

Technical designer and gameplay scripter with seven years building multiplayer gameplay systems on DayZ. The last two spent leading a project end to end: Enforce Script, server-authoritative logic, data-driven customization, progression and economy systems, level design, asset integration, and QA. Comfortable taking a feature from concept through implementation, testing, and iteration.

EXPERIENCE

Lead Developer / Technical Designer

2024 - PRESENT

Metro W.A.R. RP | Independent DayZ project | Two-person team

- Lead gameplay scripting, technical design, model integration, economy systems, and QA; collaborate with a second developer focused mainly on world, map production, and economy balance.
- Design reusable, data-driven gameplay systems spanning customization, identity, permissions, survival pressure such as radiation and sanity, and multiplayer feedback.
- Built radio voice comms over the engine's proximity VOIP: a server-side router recomputes who can hear whom each tick from position, tuned frequency and radio state.
- Shape onboarding and exploration across underground and surface environments, connecting player flow, economy, traversal, hazards, and atmosphere.
- Reproduce issues across client-server flows, harden edge cases, and iterate systems through multiplayer playtests and player feedback.

Gameplay Scripter

2019 - 2024

S.T.A.L.K.E.R. RP | Independent DayZ project

- Owned the gameplay scripting for a persistent roleplay server: 300+ community members and a full 80-player server before the project was wound down.

CORE CAPABILITIES

01 Gameplay systems & UI

Config-driven player customization, real-time preview, persistent profile rules, and server-side validation.

02 Multiplayer architecture

Server-authoritative world state, synchronized interactions, permissions, and player-facing feedback.

03 Progression & economy

Persistent identity, trading, access control, private storage, and long-term player progression.

04 World & level design

Onboarding, exploration routes, traversal, environmental hazards, atmosphere, and encounter flow.

DELIVERY LOOP

01

DESIGN

Player goals, rules, flows

02

BUILD

Server-authoritative systems

03

TEST

Reproduce, verify, iterate

EDUCATION

Tallinn Polytechnic School
