

SERGEY SENCHENKO

Junior Technical Designer | Gameplay Scripter | Level Designer

Tallinn, Estonia | Open to remote opportunities | SergeyJuze@gmail.com | github.com/Juze1234 | Project videos

PROFESSIONAL SUMMARY

Junior technical designer and gameplay scripter with two years of hands-on experience leading development of a multiplayer DayZ project. Experience includes Enforce Script, server-authoritative gameplay systems, data-driven player customization, persistent identity and progression, level design, asset integration, and end-to-end QA. Comfortable owning features from concept through implementation, testing, and player-facing iteration.

EXPERIENCE

Lead Developer / Technical Designer - Metro W.A.R. RP

Independent DayZ project | 2024-Present | Two-person team

- Lead development across gameplay scripting, technical design, model integration, game design, multiplayer economy, and QA; collaborate with a second developer focused primarily on world and map production.
- Designed and implemented a config-driven player customization and loadout workflow with real-time preview, persistent profile rules, and server-side eligibility validation.
- Built synchronized interactive world systems covering power state, switches, lighting, control panels, player feedback, and gated interactions.
- Developed persistent player identity, economy, access control, private storage, environmental hazards, and progression-supporting systems.
- Extended HypeTrain Core for multiplayer node-based traversal through model integration, simulation tuning, custom rail paths, and automatic alignment.
- Contributed level design across underground and surface environments, shaping onboarding, exploration routes, economy touchpoints, atmosphere, and encounter flow.
- Own hands-on QA alongside development: reproduce issues, trace client-server failures, validate configuration edge cases, and iterate systems through multiplayer testing and player feedback.

PROJECT IMPACT 2 years in development | 900+ community members | Full 80-player server during the latest major test | Next closed beta in preparation

SKILLS

Programming: Enforce Script; client-server RPC; data persistence; config-driven systems; debugging

Game development: Technical design; gameplay systems; multiplayer design; game economy; level design; onboarding; hands-on QA

Tools: DayZ Tools; Object Builder; Terrain Builder; Blender; Substance Painter; Adobe Photoshop

LANGUAGES

Russian - Native | English - Professional working proficiency | Estonian - Basic
